

RECEIPTIQ PROJECT REPORT

Project Title:

ReceiptIQ – Privacy First Personal Finance Agent

Submitted By:

Name: Grihshant Manash Datta

Course: AI Lab

Date: 19 April 2026

INTRODUCTION

ReceiptIQ is an AI-based personal finance assistant that extracts information from receipt images using OCR and categorizes expenses using machine learning.

The project focuses on automating expense tracking while ensuring user privacy through local data processing without relying on cloud services

OBJECTIVE

- To design an interactive user interface for the system
- To enable easy upload of receipt images
- To display extracted and processed data clearly
- To provide smooth interaction between user and system

MY CONTRIBUTION

As a Frontend Developer, my contributions include:

- Designing and developing the user interface using Gradio
- Creating an interactive system for uploading and processing receipts
- Managing user interaction flow within the application
- Displaying outputs such as extracted data and analytics clearly
- Improving usability and user experience

METHODOLOGY

Step 1: Design user interface layout

Step 2: Implement UI using Gradio

Step 3: Integrate frontend with backend processing

Step 4: Handle user inputs (image uploads, queries)

Step 5: Display processed results and analytics

Step 6: Improve usability and interaction flow

TECHNOLOGIES USED

Python

- Gradio

RECEIPTIQ PROJECT REPORT

- Plotly / Matplotlib
- HTML/CSS (basic UI concepts)

CHALLENGES FACED

Designing a simple and user-friendly interface

- Managing smooth interaction between frontend and backend
- Displaying complex outputs in an understandable format
- Ensuring responsiveness and usability

LEARNINGS

- Building user interfaces for AI applications
- Improving user experience and interaction design
- Integrating frontend with backend systems
- Importance of usability in real-world applications

CONCLUSION

The frontend plays a crucial role in making the system accessible and easy to use.

This project helped in understanding how to design intuitive interfaces and improve user interaction in AI-based applications
